Zack,

Go ahead and send a Final C-141 and we will close this one out.

Thanks,

Mike Bratcher

Guys,

I wasn't around when this release occurred so I spoke with Antonio Martinez, the engineer who filed the C141, and he told me they dug out about a foot of material from around the well head. So I took a sample at a depth of 6 in. and 1.5 ft at two different sample spots. Results are attached along with a sample map. If there are any questions or concerns let me know. Thank you

Zack,

Your closure request is approved.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.

Zack,

We will need analytical results for this one, and a closure report. Do you know how deep the excavation went? If you could get samples at the excavation depth and just below to show it was fully cleaned up. Also, was the containment area lined? If not, we will need a delineation of that area.

Give me a call if you have any more questions.

Heather,

We hauled off all stained material from the pad surface as well as the reclaimed area (which was just overspray). However I can't find any sample data for this release. We have established good vegetation across the reclaimed area and the pad looks fairly good. I have attached some pictures of what the site looks like currently. Let me know what you think and what I should do for this. Thank you

Z. Thomas
