Good morning Dylan,

Thanks again for taking our call this morning.

Upon further review of the March 2022 injection volume, we determined this was a mistake made in the field and no water was injected.
We are working to amend our C-115 now which will correct the Production/Injection Reporting in the well file.

Please let us know if you have any questions.
We appreciate your attention to this matter.

Regards,
Sarah Chapman

[EXTERNAL]
Hi Sarah,

In this case a likely scenario is that the anticipated depth in the application didn't match up with the depth the formation was encountered during drilling and the correction was never submitted.

It also appears that the well has lost injection authority, so a new C-108 will be required to continue injection. Just go ahead and make the depth correction on the C-108 and justify that he appropriate interval is perforated and the appropriate well file corrections can be made.

Lastly, it appears that injection occurred in March of this year (2022) without authority. The OCD will consider the violation and determine how to proceed.

Regards,

Dylan Rose-Coss

Good afternoon:

Spur is in the process of reinstating some inactive injection wells and we could use your help on the Big George State 3 SWD API No.30-015-28759. In reviewing the details of the well file and permit, it appears that there is an amendment to the division order SWD-611 missing from the OCD's information posted online. The original approved injection interval was 8,700'-8,800', but the previous operator reported the injection interval at 8,377'-8,409' since 1997. I consulted with our engineering team and the wellbore was only drilled to 8,409' so it didn't even penetrate the approved injection interval.

I assume that the previous operator submitted the appropriate filings to allow for this injection, but want to get your thoughts on how to proceed with reactivating this well in the current 8,377'-8,409' interval.

We appreciate your attention to this matter.

Thank you,

Sarah Chapman
