Mike,

Tetra Tech will be onsite Monday (8-25-14) to start the remediation on the above referenced site.

Prior to excavating the spill, Tetra Tech will be installing shallow backhoe trenches to collect samples to define extents. Based on the sampling results, the spill area will then be excavated to the appropriate depths. Once the remediation and depth are achieved, the excavation will be backfilled with clean material to grade. A closure report will be prepared summarizing all of the remediation activities performed at the site. Tetra Tech will also notify you during each phase of the remediation project or any schedule changes or delays on the project. Let me know if you need additional information, thanks

Ike Tavarez, PG | Senior Project Manager
