Mike:

Please find attached the amend corrective action plan we discussed earlier today on the Barclay State Battery operated by LINN Energy. As stated we have removed all grossly impacted soil inside the battery where the release was confined to and the majority cleared except the western end. Due to the presence of buried lines, the close proximity of a utility pole and tanks there are issues with further advancing the excavation in this area.

We evaluated option for the site and feel the best technical approach is to backfill the site with clean caliche compacted in shallow lifts. Once the site is closed additional corrective action can be performed at that time. If this amended corrective action plan is approved, please email me confirmation so we can proceed with closure.

Thank you for all of your assistance on this issue. Should you have any questions, please contact me.

Respectfully,

Fred Holmes
