Mike: All in T.17S & R.37E. Lea County, New Mexico.

1. Here is Map #1: The South Humble City Pool as it is currently defined.

2. Here is Map #2: The Proposed: "Lottie York Upper Strawn Pool"

NOTE: The Norris #2 Well is NOT in the Lottie York Pool. The Norris #2 Laydown 20 is in the SE SW 13 & SW SE 13

Geologic, Seismic & Hydraulic (Well Test) Data will show:

1. That the Lottie York Pool is hydraulically continuous for: Pool: S½ Sec. 14 & W½ SW Sec. 13:

The Lottie York #1	:	SE SE 14	All Upper Strawn Limeston Wells in 3-4 Algal Mound Unit.
Lottie York #2	:	NW SE 14	
Lottie York #3	:	NE SW 14	
Norris #4	:	SW SW 13	

2. Our data indicates that the Yates #1 Bureaverd in SE NW 14 may have been in our pool, but I will need their well test data to confirm or refute this.

3. That the:

Lea Farms #2	:	SE NE 14	: Upper Strawn
Ashland Federal #1	:	SW NW 13	: Upper Strawn
Norris #1	:	NW SE 13	: Lower Strawn
Norris #2	:	SE SW 13	: Upper Strawn

Are all Upper or Lower Strawn producers which are hydraulically distinct & NOT IN CONNECTION with the proposed "Lottie York Upper Strawn Pool"

Thanks,

R. A. Johnson
