Ms. Nobui,

The soil bore GPS is 32.512232, -103.136606. There is a monitor well in 0.57 miles west of the NEDU Sat. 1 that was gauged. The soil bore and MW suggest that groundwater beneath the release is 63 feet. Attached is the documentation for the SB and gauged monitor well. Please let me know if you have any questions or wish to discuss. Thanks and have a good day.

Hello Larry

OCD has reviewed your Deferral Request for the above-referenced site and we cannot approve it without determining where depth to groundwater is. You mention a boring advanced 0.5 miles north of the site and provided a drilling log in your Remediation Plan dated 9/25/20. However, we need more info on this boring than what you provided. Can you email me the lat and long of this boring? I cannot find anywhere any info on this boring location. Without reliable groundwater data, we cannot approve this deferral request.

Please let me know if you have any questions.

Thanks,

Jennifer Nobui, PG ● Environmental Specialist A
