Subject: South Loop 10"

To all, the sample results came back on the soil pile that we sampled Wednesday, the middle part of the pile tested about 3000 mg/kg chlorides.

With your permission we will haul this material off, approximately 40 cubic yards, and bring in some clean sand to backfill and bed the exposed pipe.

We were trying to line up a crew to get this done today or tomorrow if possible.

Thanks

Tony
