---

BLM tentatively approves only going down to 3 feet (or whatever level the hardrock is) with the understanding that once the analysis from the samples is reviewed, other steps might have to be taken. Thank you!

How deep has it been able to trench so far?

Lady's,

As we dig along the spill path we have a problem! Using our largest trackhoe we are having issues getting to 4' BGS. The rock is turning out to be much more dense then we expected. So I am requesting a change in the plan. May we stop at 3' BGS? We will still follow the other COA's. Please advise.  
Thanks

Mike Burton
