INTRODUCTION

On behalf of Mewbourne Oil Company, Souder Miller & Associates (SMA) has prepared this Workplan for closure activities related to incident # 2RP-2532. This document also provides a summary of the release and spill response efforts at the San Lorenzo SWD #001, a lease held by Mewbourne Oil.

According to the Release Notification and Corrective Action Form C-141 submitted by Mewbourne Oil *"On September 26, 2014, the SWD line running along the west side of Highway 285 from the San Lorenzo SWD to the Delaware Ranch SWD was damaged in the draw between mile marker 6 and 7 by debris and rising flood waters causing a release of 1726 barrels mixed fluids. Upon discovery, approximately 253 barrels of oil and 267 barrels of water were immediately recovered utilizing vac trucks. The area affected was approximately 6,000 feet in length from the bridge south down the draw."* When Souder, Miller & Associates (SMA) personnel arrived, previous remediation actions had been taken by Talon LPE on behalf of Mewbourne Oil. The following is an excerpt from the Talon LPE, Remediation and Sample Report. Refer to Appendix C.

"Between September 30 and October 16, 2014, Talon mobilized personnel to the release location. Absorbent pads and booms were used for hand-recovery of free phase oil. The impact soil was hand-excavated and stockpiled on plastic sheeting and construction bags were used to dispose of the oily pads and booms. One truck load of contaminated soil and sorbent media was disposed of at Lea Land, LLC, an approved NMOCD disposal facility. See Appendix III for the disposal manifest.

On November 6, 2014 Talon/LPE mobilized personnel to obtain surface water samples and on November 26, 2014 soil sampling from bank sediments was completed. See Table 1 below for resulting lab data analysis. A site map presenting surface water (W-1), soil/sediment (S-1) and background (BG-1) soil sampling is attached hereto in Appendix I.

All soil samples were collected by Talon personnel wearing clean nitrile gloves. The soil samples were placed in laboratory provided sample containers, iced and transported to Cardinal Laboratories in Hobbs, New Mexico for analysis. The samples were tested for volatile organics (BTEX) via EPA Method 8021B (soil) and EPA Method 8026B (water), TPH (Total Petroleum Hydrocarbons) using EPA Method 8015M and Total Chlorides by Method SM 4500Cl-B."

The site is located in Unit H, Section 34, Township 25 South, Range 28 East, Eddy County, New Mexico. Figure 1, Site Location Map, illustrates the location of the release.

This document presents the results of the initial assessment and soil sampling performed at the Site, the regulatory framework for existing activities, and a summary of work done at the location designed to facilitate incident mitigation and closure. Site details, sampling locations, and the remedial excavation area are presented in Figure 2. Appendices include the laboratory analytical reports for the initial sampling and New Mexico Oil Conservation Division (NMOCD) form C-141 (initial).

REGULATORY FRAMEWORK AND SITE CLASSIFICATION

This project was conducted under the regulatory jurisdiction of the NMOCD, which requires the vadose zone to be abated so that water contaminants in the vadose zone will not, with reasonable probability, contaminate groundwater or surface water (toxic pollutants as defined in 20.6.2.7 New Mexico Administration Code shall not be present) through leaching, percolation, or other transport mechanisms (19.15.1.19 NMAC, Subsection B, Paragraphs 1 and 2). The NMOCD hydrocarbon soil remediation levels are determined by ranking criteria on a site-by-site basis, as outlined in the NMOCD "Guidelines for Remediation of Spills, Leaks, and Releases", dated August 13, 1993. The ranking criteria are based on three site characteristics: depth to groundwater, wellhead protection, and distance to surface water.

According to the Office of the State Engineer's records, no water wells are located within 1,000 feet of the well pad and tank battery. The estimated depth to groundwater is less than 50 feet below ground surface. A surface water body is located within 1,000 feet of the well pad and battery. The table below illustrates the ranking criteria, used by the NMOCD, and includes site specific characteristics at the West Brushy 8 location.

Criteria Site Characteristics	Ranking Score	
Depth to Ground Water	<50 feet	20
Wellhead Protection Area	>1000 feet	0
Distance to Surface Water	<1000 feet	<u>20</u>
Total Ranking Score	20	

Based on the site characteristics and the NMOCD guidelines, the site has a ranking score of 20. Consequently, Recommended Remediation Action Levels (RRALs) of 10 milligrams per kilogram (mg/Kg) Benzene, 50 mg/Kg total Benzene, Toluene, Ethylbenzene, and total Xylenes (BTEX); and 100 mg/Kg Total Petroleum Hydrocarbons (TPH) are proposed for remediation at the site.

SOIL SAMPLING RESULTS

All samples in Table 1 below were collected by Talon LPE and their staff. Refer to Appendix C.

TABLE 1

Analytical Report-H403437, H403673	Sample Date	Depth	BTEX mg/Kg	GRO mg/Kg	DRO mg/Kg
W-1	11-12-14	N/A	<0.006	<1.00	<1.00
W-2	11-12-14	N/A	<0.006	<1.00	<1.00

BG-1	11-12-14	0	<0.300	<10	<10
BG-2	11-12-14	0	<0.300	<10	<10
BG-3	11-12-14	0	<0.300	<10	<10

N/A – Not Analyzed Refer to Analytical Reports, Appendix A

All laboratory analytical results are below the site specific NMOCD RRALs based on the ranking criteria.

SPILL MITIGATION WORKPLAN

The spill mitigation approach proposed in this Workplan is primarily to improve the vegetation found in the draw for area livestock through a thermal treatment. A mitigation by prescribed burn will be utilized to accomplish the goals stated above. The efficacy of the treatment, a prescribed fire, has been evaluated as a tool to thermally remove higher order hydrocarbons from the draw's vegetation, not the area soils or surface water. The levels of hydrocarbons remaining in Red Bluff Draw's soil from the incident are below the NMOCD recommendations for closure. The main concerns to be addressed by the thermal treatment are the removal of affected vegetation and the rejuvenation of the feeding value of the draw for area livestock and wildlife.

SMA researched and documented existing evidence that supports the anticipated effectiveness of a prescribed fire as a remediation approach for hydrocarbon-impacted vegetation. SMA also collected representative paraffin samples from the draw for laboratory analysis to help characterize the hydrocarbons that need to be consumed and understand their behavior with fire.

Because of the heavy rain events, the long duration of time since the release occurrences, and the recommended February-March prescribed burn season, it is likely that the majority of the hydrocarbons found in Red Bluff Draw have volatilized or degraded months before the issuance of this report. Most light and medium weight components of crude oil generally break down or volatilize within the first month of a release, depending on spill composition, volume and ambient temperature. With this in mind, SMA has concentrated on the mitigation of higher molecular weight components of crude oil, those comprised of 23 carbon atoms or greater. These larger chain hydrocarbons typically take years to break down and volatilize.

Through several field visits, sample collection and operator field notes, SMA has reached the conclusion that the majority of the residual hydrocarbon found in and around the vegetation in Red Bluff Draw is "slack wax" or raw unrefined petroleum paraffin wax. Paraffin wax is a complex combination of hydrocarbons, most being chains of greater than or equal to 23 carbon atoms, from raw or crude petroleum fractions. Slack wax or unrefined paraffin has an estimated melting point between 94 °F and 150 °F and a flash point between 400 °F and 440 °F. With the estimated temperatures of the prescribed burn in Red Bluff Draw ranging from 380 °F to 620 °F, a large portion of the residual paraffin should be consumed by the fire.

CONFIRMATION SAMPLING

Soil samples were taken by a 3rd party company, Talon LPE. The samples are presented in Table 1 with locations shown in Figure 2. The sample results are under the site specific RRALs according to NMOCD. The soil samples were collected on 11/26/14 by Talon LPE. The soil samples were delivered on 12/02/14

to Cardinal Laboratory, in Hobbs, New Mexico. Soil and water samples were analyzed for BTEX, TPH and Total Chlorides. Using EPA Method 8021B, Method 8015M and SM4500Cl-B.

SITE CLOSURE

Shown in Appendix C "On behalf of Mewbourne Oil Company, we respectfully request that no further action be required and that closure with respect to this portion of this project be granted."

RE: SAN LORENZO SWD

Enclosed are the results of analyses for samples received by the laboratory on 11/07/14 16:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-13-5. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene".

RE: SAN LORENZO SWD

Enclosed are the results of analyses for samples received by the laboratory on 12/02/14 13:45.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-13-5. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Celey D. Keene".

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

If a Watercourse was Impacted, Describe Fully.*

SWD line ran alongside west side highway 285 from the San Lorenzo SWD to the Delaware Ranch SWD was damaged in the draw between mile marker 6 and mile marker 7 under bridge while draw was flowing.

Describe Cause of Problem and Remedial Action Taken.*

Debris and flood waters caused damage to poly line underneath bridge. The line was capped off on the 9-28-2014 stopping the release.

Describe Area Affected and Cleanup Action Taken.*

Affected area- The draw was affected from the bridge at highway 285 to approximately six thousand feet east down the draw, small remnants of oil believed to be from the same release were found an additional six thousand feet down the draw. Mewbourne Oil Company has recovered 253 bbls of oil from the area with vacuum trucks and skimmers, and is continuing cleanup efforts via hydrocarbon absorbing pads and booms across the flowing draw.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Subject: **Remediation and Sampling Report**
Mewbourne Oil Company
San Lorenzo SWD No. 1
API: 30-015-23067, 2RP-2532

Dear Mr. Bratcher,

Mewbourne Oil Company (MOC) contracted Talon/LPE (Talon) to perform remediation and sampling services at the above referenced location. The results of our completed remedial actions, soil and surface water sampling program and closure request for this phase of the project are submitted herein.

Background Information

The San Lorenzo SWD No.1 is located approximately 12 miles southeast of Loving, New Mexico. The legal location for this release is Unit Letter H, Section 34, Township 25 South, and Range 28 East in Eddy County, New Mexico. More specifically the latitude and longitude for the release are 32.086841 North and -104.069744 West. A site plan is presented in [Appendix I](#).

According to the soil survey provided by the United States Department of Agriculture National Resources Conservation Services, the soil in this area is made up of Karro fine sandy loam with 0 to 3 percent slopes. Per the New Mexico Bureau of Geology and Mineral Resources, the local surface and shallow geology is made up of the Rustler Formation, upper Permian Age, comprised of siltstone, gypsum, sandstone, dolomite. Groundwater in the project vicinity is approximately 0-5 feet below ground surface (bgs).

The ranking for this site is 20 based on the following:

Depth to ground water	<50'
Wellhead Protection Area	>1000'
Distance to surface water body	<1000'

Incident Description

On September 26, 2014, the SWD line running along the west side of Highway 285 from the San Lorenzo SWD to the Delaware Ranch SWD was damaged in the draw between mile marker 6 and 7 by debris and rising flood waters causing a release of 1726 barrels mixed fluids. Upon discovery, approximately 253 barrels of oil and 267 barrels of water were immediately recovered utilizing vac trucks. The area affected was approximately 6,000-feet in length from the bridge south down the draw. The Initial C-141 is presented in [Appendix II](#).

Remedial Actions Taken

Between September 30 and October 16, 2014, Talon mobilized personnel to the release location. Absorbent pads and booms were used for hand-recovery of free phase oil. The impact soil was hand-excavated and stockpiled on plastic sheeting and construction bags were used to dispose of the oily pads and booms. One truck load of contaminated soil and sorbent media was disposed of at Lea Land, LLC, an approved NMOCD disposal facility. See [Appendix III](#) for the disposal manifest.

On November 6, 2014 Talon/LPE mobilized personnel to obtain surface water samples and on November 26, 2014 soil sampling from bank sediments was completed. See [Table 1](#) below for resulting lab data analysis. A site map presenting surface water (W-1), soil/sediment (S-1) and background (BG-1) soil sampling is attached hereto in [Appendix I](#).

All soil samples were collected by Talon personnel wearing clean nitrile gloves. The soil samples were placed in laboratory provided sample containers, iced and transported to Cardinal Laboratories in Hobbs, New Mexico for analysis. The samples were tested for volatile organics (BTEX) via EPA Method 8021B (soil) and EPA Method 8026B (water), TPH (Total Petroleum Hydrocarbons) using EPA Method 8015M and Total Chlorides by Method SM 4500Cl-B.

Laboratory Results

See [Appendix IV](#) for complete laboratory reports.

November 12, 2014

Table 1

Sample ID	BTEX (mg/kg)	Chlorides (mg/kg)	TPH (mg/kg) GRO	TPH (mg/kg) DRO	TPH (mg/kg) EXT DRO
W-1	<0.006	840	<1.00	<1.00	<1.00
W-2	<0.006	600	<1.00	<1.00	<1.00
W-3	<0.006	630	<1.00	<1.00	<1.00

December 5, 2014

Table 1, cont.

Sample ID	Depth (feet)	BTEX (mg/kg)	Chlorides (mg/kg)	TPH (mg/kg) GRO	TPH (mg/kg) DRO
S-1	0	<0.300	1300	<10	<10
	0.5	<0.300	1700	<10	<10
S-2	0	<0.300	112	<10	<10
	0.5	<0.300	48	<10	<10
S-3	0	<0.300	112	<10	<10
	0.5	<0.300	96	<10	<10

BG-2	0	<0.300	9060	<10	<10
BG-3	0	<0.300	9200	<10	<10

Based upon the site ranking of 20, the NMOCD Recommended Remedial Action Levels (RRAL's) are 50 mg/kg for BTEX, 10 mg/kg for Benzene and 100 mg/kg for TPH.

Closure

On behalf of the Mewbourne Oil Company, we respectfully request that no further actions be required and that closure with respect to this portion of this project be granted.

If we can provide additional information or be of further assistance please contact our office at 575.746.8768.

Respectfully submitted,

TALON/LPE

RE: SAN LORENZO SWD

Enclosed are the results of analyses for samples received by the laboratory on 11/07/14 16:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-13-5. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene".

Celey D. Keene
Lab Director/Quality Manager

RE: SAN LORENZO SWD

Enclosed are the results of analyses for samples received by the laboratory on 12/02/14 13:45.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-13-5. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Celey D. Keene".

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.
