---

Lupe,

The BLM requests the following adjustments to your work plan, S1 and S2 need to be excavated to a minimum of 4' (four feet). S3 is accepted as written with the continued delineation.

While you have equipment on site...why don't you use the material from the "stinger" on the BKU 530 as backfill? That should have been removed during Interim Reclamation. Test the caliche to make sure it is clean prior to use. If you do not choose to utilize it, then it will need to be removed at the end of this clean-up and the area reseeded along with the rest.

The BLM approval/acceptance does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment or if the location fails to reclaim properly. In such an event that the location does not revegetate, or future issues with contaminants are encountered, the operator will be asked to address the issues until the contaminant issues are fully mitigated and the location is successfully reclaimed. In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state or local laws/regulations.

If you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

*Shelly J Tucker*

Lupe,

Your work plan for the above listed site is approved as written. Keep in mind as you continue your delineation at sample point S3, that chloride delineation goals are 250mg/kg.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.
