Describe Cause of Problem and Remedial Action Taken.*

BOPCO EHS was notified of a release that occurred on the PLU 105 Flowline due to corrosion. Contract crew installed an emergency repair clamp until the line can be replaced. **Originally reported as the PLU 84 (2RP-3199), once the flowlines were exposed it was determined that the PLU 105 flowline was the line that leaked**

Describe Area Affected and Cleanup Action Taken.*

A vacuum truck was called to the location and was able to recover 1 barrel of oil. Samples were collected and field tested. Based on field testing data and NMOCD approval the contaminated soil has been excavated and hauled to a state approved disposal facility, and the excavation backfilled with clean soil.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
