Hi Heather,

I wanted to touch base with you on the Pecos River Station remediation. We have removed the tanks, excavated the contaminated soil, and collected confirmation samples. I have attached our site map and lab data. As you will see S-4 is at 388 mg/kg of DRO (ranking of 20 as you know). We dug down another 6-inches in that area today and I took another sample. The question I have for you is, can we get pre approval to backfill if the sample comes back below 100 mg/kg for TPH? I will forward you the lab report as soon as I get it but I would like to start rebuilding the battery and get it back into operation ASAP for obvious reasons. What are your thoughts? Feel free to give me a call on my cell anytime if you want to discuss.

Respectfully,

Sheldon L. Hitchcock
