Subject: Key BKE SWD

Hi guys,

Got a call from Cindy with Souder/Miller I believe. They are putting together a package for Key to continue delineation on this site. For now they want to finish up in the NW area a horizontal examination. Impressed upon them that in conjunction it might be a good idea to place a couple of temp wells. One in heart of this same corner and then one, in an agreed upon location, for background. Seeing if we have GW impact early will obviously drive some aspects of future ops on the site. She agreed with this idea. Also indicated that large scale money output at this time from Key may not be in the cards, but they did feel they needed at least this look at the GW. She is packaging a cost for them. She understands that it is our thought that there will eventually be a lot more investigation across the site, but for now... We will see what she sends in.

Hope all are well. hasta
Brad
