Hi Austin,

Couple of things. Would really like a map of some variety indicating on the site the area you identify as the tank battery. This should be, I think, the area where some excavation has already taken place(?). Understanding that there may be, as I suspect, some issue under the newer tanks, but for now, not much to do with them.

Please check with Mike and I post submitting a map to us, a nominal placement for this background well/point of reference. Mike and I have some opinion on this placement and would like to interject that if we could.

Also, although I appreciate knowing what things cost currently, you don't need to send in a cost estimate relative to interactions with the OCD.

Anyway, let us in on the location aspect and we will get back with you quickly. I have called Mike for his input on the rest of the proposal. Will get back to you on that.

Take care and thank you.

Brad
