PLU CVX JV BS 008H 9-14-15.xlsx

Mike/ Heather

Attached you will find the initial C-141 for the release that occurred on the PLU CVX JV BS 008H 2RP-3271 when the packing gland failed on the triplex pump. As seen in the attached internal spill report 49 barrels was released inside the lined containment, 48 barrels of same fluid was recovered. One barrel of fluid did escape the lined containment through a pinhole of containment. Since only one barrel or less was released to the ground surface I would like to request closure of 2RP-3271. If approved I will submit a final C-141 and closure report. Please let me know if you have any questions or concerns. Thank you.
