Mike,

We've proposed to excavate 1' and haul off out of the leak area. The highest chloride content is from surface to 1'. I believe blending will be a good solution for contaminated in between 1' and 2', putting the liner on bottom at 2', because chlorides are in the 2000 range at that depth so can be easily blended down below 1000. Please call me if you want to discuss.
