RE: Corrective Action Plan
Burnett Oil Co., Inc. - Gissler A 30
UL/P sec. 11 T17S R30E

Mr. Bratcher

The above location is located approximately 2 miles northeast of Loco Hills, New Mexico at UL/P sec. 11 T17S R30E. The site is located in an area of no known groundwater.

On February 26, 2016 a release was discovered of 8 barrels of crude oil and produced water. The release occurred when the packing on the well head ruptured, and caused the release of produced water and crude oil. The release impacted a 150' x 2'-5' area on the well location, and a 50'x1' area in the pasture on the West side of the well pad. The BLM and the NMOCD were both notified of the release on February 26, 2016 with the initial C-141 being filed on the same day.

Corrective Action Plan

Burnett Oil Co., Inc. hired Aspen Grow to aid in the remediation of the impacted area. On March 31, 2016, Aspen Grow traveled to the location to begin the remediation process. The impacted area is being treated with the remediation chemical "Detox", and the first application will be applied weekly for four weeks. Once the initial four applications have been applied, samples will be collected and taken to an accredited lab for analytical. A second application of "Detox" will be applied if the analytical is above Regulatory levels, along with samples to conclude the remediation process. At that time, we will look at the analytical to determine the closing of the location.

April 8, 2016

Following the approval of the plan and after the remediation has taken place, Burnett Oil Co., Inc. will submit all proper closure documentation to the NMOCD and the BLM in accordance to the State and Federal Guidelines set forth.

Please feel free to contact me with any questions concerning this remediation plan request.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Johnny Titsworth', with a long, sweeping horizontal line extending to the right.
