RE: Lime Rock Resources * ASAU 149 Trunk line release * 30-015-00204 * 2RP-3940

Mike,

The OCD will need further vertical chloride delineation in the area north of the DCP line. Your delineation needs to reach 250 mg/kg. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table. Please let us know how and when you intend to obtain this delineation.

If you prefer to place your liner before drilling for your delineation, you may NOT breach through the liner. In this case, you must set conduit and seal the liner around the conduit.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.

Heather Patterson
