NATURE OF RELEASE

Type of Release Produced water release	Volume of Release 5bbls	Volume Recovered 0bbls
Source of Release Heater treater fire tube	Date and Hour of Occurrence April 2, 2016 @ 11:33 AM	Date and Hour of Discovery April 2, 2016 @ 11:33 AM
Was Immediate Notice Given? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? Kellie Jones, OCD	
By Whom? Ray Carter, Assistant Production Foreman	Date and Hour April 3, 2016 @ 7:05 AM	
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse N/A	

If a Watercourse was Impacted, Describe Fully.*
N/A

Describe Cause of Problem and Remedial Action Taken.*

Fire tube on heater treater had a hole releasing approximately 5bbls produced water on to location. The immediate actions were to make sure the well was down so the inlet on the heater treater could be closed and the drain opened to send the remaining fluid to the water tanks to stop any further release. A vacuum truck was able to pull the remaining fluid from the heater treater to ensure it was completely empty. The heater treater has been taken out of service until repairs can be made.

Describe Area Affected and Cleanup Action Taken.* The release was 5bbls produced water with 0bbls recovered located on the West side of location close to the heater treater in approximately a 15'x20' area. All fluid remained on location. An environmental agency will be contacted for remediation of the affected area.

The impacted area was delineated using a hand auger. Soil samples were collected from three sample points 1 inside the fence, and 2 outside the fence. Samples were field tested for chlorides and selected samples were delivered to the lab for analysis. Lab results indicated minimal downward migration with the samples at 1' below ground surface being well below closure limits. The remediation was conducted using the dig and haul method as per New Mexico Conservation Division approved work plan. The impacted area was excavated to a depth of 6" below ground surface. Fresh caliche was used for backfilling the area. All impacted soils were transported to a division approved disposal facility for disposal.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
