

RE: 2RP-3893

At this time, your proposal, dated January 2, 2017 is **not** approved. OCD requests that a investigation/monitor well be installed as close to the point of release as practicable. Based on your "Figure 1" in the proposal, this will be in the approximate location identified as "S-1 -10' ". Well screenings are to be set at 5ft above water surface and 10 ft below water surface. A survey of the top of the well casing is to be within 1/100 of an inch. OCD also requests that during drilling operations, soil samples be obtained at 5' intervals and tested for BTEX, TPH and Chloride. Once the well is completed, water samples are to be obtained for analyses, utilizing standard, acceptable sampling methods and protocol. Once this data has been obtained, OCD will evaluate, and consider a soil remediation proposal, and if necessary, a water abatement plan. Please advise once the boring activity has been scheduled.
