If a Watercourse was Impacted, Describe Fully.*

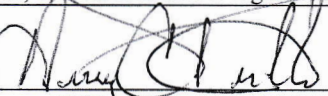

Describe Cause of Problem and Remedial Action Taken.*

A connection on the charge pump by-pass line failed. The connection was repaired.

Describe Area Affected and Cleanup Action Taken.*

The leak affected 27,045 square feet of caliche pad within the fenced battery area. Vacuum trucks recovered standing fluids. The impacted area was scraped and 132 cubic yards of saturated caliche surface soils were removed to a NMOCD approved disposal facility. In November, 2016, soil samples were collected and sent to a commercial laboratory for chloride analysis. Chlorides throughout the soil profile were confirmed to be below the recommended action level.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
