RE: EOG Y \* Central Dagger Draw Water Station \* 2RP-4298

The proposal for delineation/remediation of the above referenced release is approved. Delineation goal for chloride impact is 600 mg/kg. The proposed 10' additional investigation is not required. Since this approval is so late, please advise if the proposal is no longer valid, or has commenced/been completed.

Thank you,

Mike Bratcher  
NMOCD District 2  
811 South First Street  
Artesia, NM 88210  
575-748-1283 Ext 108

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

Ms. Weaver,

Please find attached to this email a site characterization and work plan for the referenced site. EOG Y (formerly Yates) has engaged Ranger Environmental Services, Inc. to assist them with assessing and remediating this release to NM OCD standards. ***Please note, Ranger has scheduled with a driller to complete the horizontal and vertical soil delineation at this site, and these delineation activities are tentatively scheduled for next week. If you have any changes or additional assessment requirements regarding the work plan, please let me know and I can amend the plan.*** Additionally, as I plan to be in Artesia next week completing the assessment activities, it would be great if you had some spare time for me to come meet you at your office.

Thank you for your time and I appreciate your regulatory assistance with this project.
