Describe Cause of Problem and Remedial Action Taken.*												
The packing on a slip style flange at the wellhead failed resulting in the release of fluid onto the well pad. The packing was replaced.												
Describe Area Affected and Cleanup Action Taken.*												
All of the fluid remained on the well pad. A vacuum truck was utilized to recover all freestanding fluids. Remediation of the affected area was conducted utilizing field screenings to guide excavation activities. Soil samples were taken from the bottom and sidewalls of the excavation to confirm all impacted soil above NMOCD RRAL's was successfully removed. Upon receipt of acceptable analytical results the excavation was backfilled and contoured to match the surrounding location.												
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
