Hello Ms. Baker,

OCD has received the closure report for 2RP-4984, thank you. At this time this closure is not approved for the following reasons:

1. Table 1 criteria is: Chlorides < 600 mg/kg, TPH < 100 mg/kg, BTEX < 50 mg/kg due to: DTW <50', < 300' to ephemeral stream, medium karst area.
2. All pasture sidewalls show contamination. All off pad areas must have minimum 4' uncontaminated soil. Further delineation and remediation is required.
3. TPH is too high in areas SS01, SS02, further delineation and remediation is required.
4. Chlorides are too high in all areas, further delineation and remediation is required.
5. Photos did not have GPS markers.
6. Adjust spill calculations, OCD estimates a minimum of 50bbbls.

Please let me know if you have any questions or need further assistance.

Best Regards,

Maria Pruett
