Hello Ms. Baker,

OCD has received the C-141 Remediation Plan, thank you! This plan is approved.

Best Regards,

Maria Pruett

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

Maria,

Thank you for the quick response. The attached revised work plan includes a proposed timeline at the end of the report and Figure 2 includes existing sample locations.

Regarding your question about the spill area and excavation extent, the excavation extended outside of the release footprint because field screening results indicated we were not get clean samples in

that area. We stepped out with the excavation until the field screening confirmed our lab samples would meet standards. Couple of additional reasons might include; the release may not have been mapped perfectly initially, the release may have spread southward through the subsurface and along the surface, and/or the we could encounter historical impact during excavation.

Thank you!

Adrian Baker

Hi Adrian,

Can you add the sample points to the map and add a timeline? Also, can you address why the spill area and excavation area are different? I can approve the work plan with these adjustments.

Best Regards,

Maria Pruett
