Subject: New Rule Links 2RP-4730

Hello Mr. Herrygers,

Thank you for speaking with me this afternoon. Below are links to the Revised Spill Rule and updated C-141 forms. The area around 2RP-4730 has medium karst as well as 2 USGS wells that show depth to ground water to be less than 50', therefore the spill should be remediated to the most protective standard that includes: Chlorides < 600 mg/kg and TPH < 100 mg/kg, these numbers will be found in Table 1 in the revised rule. Please also note that final samples must include all 4 constituents and any spill off pad should have the top 4' be of non-waste containing, uncontaminated material so those samples should be at non-detect or the same as a background sample.

Moving forward the point of contact for this spill will be Mr. Brad Billings, cc'd above. Please let me know if you have any questions or need further assistance.

Revised Rule: <http://www.emnrd.state.nm.us/OCD/documents/NaturalResourcesWildlifeOilandGasReleases.pdf>
Updated C-141: <http://www.emnrd.state.nm.us/OCD/forms.html>

Best Regards,

Maria Pruett
