Attachments: [image001.jpg](#)

Good afternoon Rachel,

OCD has processed the final C-141 for the Lea Unit #004 RP-4003 and has approved the closure however, the release will remain open and not closed in the OCD database due to chlorides exceeding 600 mg/kg in the sampling area of DP-1. You may remediate the area in DP-1 and provide analytical results to close the release.

19.15.29.13 RESTORATION, RECLAMATION AND RE-VEGETATION

D. Reclamation of areas no longer in use. The responsible party shall reclaim all areas disturbed by the remediation and closure, except areas reasonably needed for production operations or for subsequent drilling.

(1) The reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

Please let me know if you should have any questions.

Thank you,

Vanessa Fields

Subject: [EXT] 1RP-4003 Lea Unit 004 Closure Report

Good Afternoon,

Larson & Associates, Inc. (LAI), on behalf of Legacy Reserves, LP (Legacy), submits the attached closure report (see link below) for a produced water spill at Lea Unit #004 (1RP-4003) located Lea County, New Mexico. Your approval of the closure report is requested. Please feel free to contact Mr. Brian Cunningham with Legacy bcunningham@legacylp.com, myself, or Mark Larson if you have any questions.

Respectfully,

Rachel Owen
