RE: [EXT] Third attempt - Remediation Plan - JRU 138 @ JRU 19/2RP-4980

OCD has received your Remediation Plan for James Ranch Unit #138 at JRU 19 Battery **2RP-4980**, thank you. To continue processing this work plan, please, resend it including the following:

- Information on groundwater depth (water well data, data archived in the NMOSE, etc.)
- Laboratory results should be provided as evidence of delineation efforts.
- Include a scaled sitemap that shows where the 57 delineation samples were taken.
- To evaluate your request to modify the closure sampling requirements, submit a scaled sitemap with the approximate locations of the proposed confirmation samples. Please note that according to the form C-141 "Characterization Report Checklist" & "Remediation Plan Checklist" **a scaled sitemap showing impacted area, surface features, delineation points and monitoring well** must be included in the plan.
- Finally, keep in mind that NMOCDC no longer uses the risk based ranking system to evaluate the remediation action levels.

Victoria.Venegas@state.nm.us

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations
