Subject: RE: (Closure Report) COG Loco Hills SWD #1 10-13-2018 (2RP-5018)

Ike,

If you intend to leave impact in place ,as stated, closure cannot be issued.

Ryan,

The assessment did show some impact underneath the liner. The release occurred on the eastside of the facility inside the containment. Due to access issues, two (2) hand augers (SP-1 and SP-2) were installed inside the containment and a borehole (BH-1) installed immediately outside the containment near the release point. Based on the results, all of the samples were below 20,000 mg/kg regulatory limit and ranged from 417 mg/kg (SP-1, 5-5.5') to 6,960 mg/kg (SP-2, 1-1.5'). We will be leaving the impact in place underneath the liner facility.

The scarred area in the pasture appears to be from a prior remediation/cleanup performed in the site, which did not have any re-growth in the area. To reclamation the pasture, COG will seed the recent remediation area and include the scarred area to revegetate these areas. Let me know if you need additional information, thanks

**** External email. Use caution. ****

NMSLO does not accept closure for this release. The report states that a hole developed in the liner, which resulted in the pasture being impacted; so it there contamination beneath the tank battery? This wasn't clear to me. Is your plan to leave to facility contamination since it is less than 20,000 ppm for chlorides?

Reclamation/revegetation is also an issue. This site has had releases that have flowed off pad to the southwest as this one did. There is a scar on Google Earth imagery dating back to at least 2011. Revegetation either has never been achieved or there are releases over the reveg area. This site will need to be able to support vegetation before closure will be issued.

NMOCD may have additional concerns. Please contact me if you have any questions.

Mr. Mann,

Please see the attached closure report for the COG Loco Hills SWD #001 incident that occurred on October 13, 2018. If you have any questions or concerns please do not hesitate to contact me.

Thank you,

DeAnn Grant
