***Characterization &
Remediation Plan***

Boyd X State Com #15H

30-015-42223

Section 16, T19S-R25E

Eddy County, New Mexico

January 6, 2020

2RP-5594

I. Location

From Artesia, NM travel south on US 285 to Rocking R Red Road, (CR 21) between MM56 & MM57. Turn right (west) onto Rocking R Red Road, continue for approximately 7.0 miles, then turn right (north) onto lease road, continue on lease road for approximately 1.1 miles, turn right (southeast) and continue for 0.15 miles, turn left (northeast), continue 0.1 miles to the Julie #2 location, road turns right (east), continue 0.5 miles to the Boyd X State Com #15H Battery.

II. Background

On August 88, 2019, EOG Resources, Inc. submitted to the NMOCD District II office a Form C-141 for the release of 1 B/Oil and 4 B/PW with 0 B/Oil and 3 B/PW recovered. The affected area is approximately 15' X 25' within the primary berm of the battery. The release was caused by a ¼" nipple on the bottom of the dump valve that corroded and failed, which caused the release. A vacuum truck was called and recovered the remaining produced water. A backhoe was dispatched and scraped up the surface of the impacted area, contaminated soils were disposed at an NMOCD approved facility. The release occurred on the well pad and remained on the well pad

III. Surface and Ground Water

Area surface geology is Piedmont alluvial deposits. Based on information regarding this location (Section 16, T19S-R25E), the New Mexico Office of the State Engineer (NMOSE) Point of Diversion Summary indicates the depth to groundwater as follows: (NMOSE-RA05900, Depth to Water: 95', Log File Date: 3/1974, Distance from Location: 0.72 miles), the United States Geological Survey National Water Information System, indicates the depth to groundwater as follows: (USGS #324041104294801, Depth to Water: 120', Field groundwater-level measurements: 1/2012, Distance from Location: 0.83 miles, USGS #324004104285801, Depth to Water: 95', Field groundwater-level measurements: 1/2015, Distance from Location: 0.73 miles, USGS #323948104302901, Depth to Water: 97', Field groundwater-level measurements: 2/1994, Distance from Location: 0.78 miles).

Watercourses in the area are dry except for infrequent flows in response to major precipitation events, with the nearest body of surface water being the Pecos River (7.55 miles, southwest of the location).

IV. NMOCD Table I Criteria

Depth to ground water	51-99'
Wellhead Protection Area	> 1000'
Distance to significant watercourse	> 1000'

Depth	Constituent	Method	Limit
51-99'	Chloride	EPA 300.0 or SM4500 Cl B	10,000 mg/kg
	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	2,500 mg/kg
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

V. Site Delineation Status

Initial sampling was conducted on August 13, 2019, with samples collected at the following depths.

S-1.1:	12"
S-1.2:	24"
S-1.3:	36"
S-1.4:	48"

These samples were sent to an NMOCD approved laboratory and analysis for the following constituents/methods.

Chlorides:	EPA 300.0
TPH (GRO+DRO+MRO):	Method 8015M
BTEX:	Method 8015B
Benzene:	Method 8015B

Appendix 5 contains the Field Data/Sample Data.

Appendix 6 contains Laboratory Data and COC.

VI. Remediation Plan

EOG proposes the following remediation plan.

EOG Resources, Inc. had a contractor excavate soils from the release/sample area. This excavated area will be approximately 15' X 25' X 2', these soils will be taken to an approved NMOCD facility. The excavation depth at this time is based off of the 8/13/2019 enclosed analytical results. EOG will collect samples of the bottom of the excavation as well as the sidewalls will be collected and analyzed for the same constituents/methods as described in Section V. EOG will test the remediated areas for contamination with representative five-point composite samples and individual grab samples from any wet or discolored areas. The samples will be analyzed for the constituents listed in Table I of 19.15.29.12 NMAC. If these samples indicate any levels above the NMOCD Table I Criteria, Closure Criteria for Soils Impacted by a release for the 51-99' limits, further impacted soils will be excavated/tested until levels are below closure limits.

EOG will notify the appropriate division district office two business days prior to conducting final sampling. Separate representative wall and base 5-point composite samples will be collected to show horizontal and vertical remediation. Each composite sample must not be representative of more than 200 ft².

If all composite and grab sample concentrations are less than or equal to the parameters listed in Table I or any conditions of approval, then the responsible party may proceed to backfill any excavated areas.

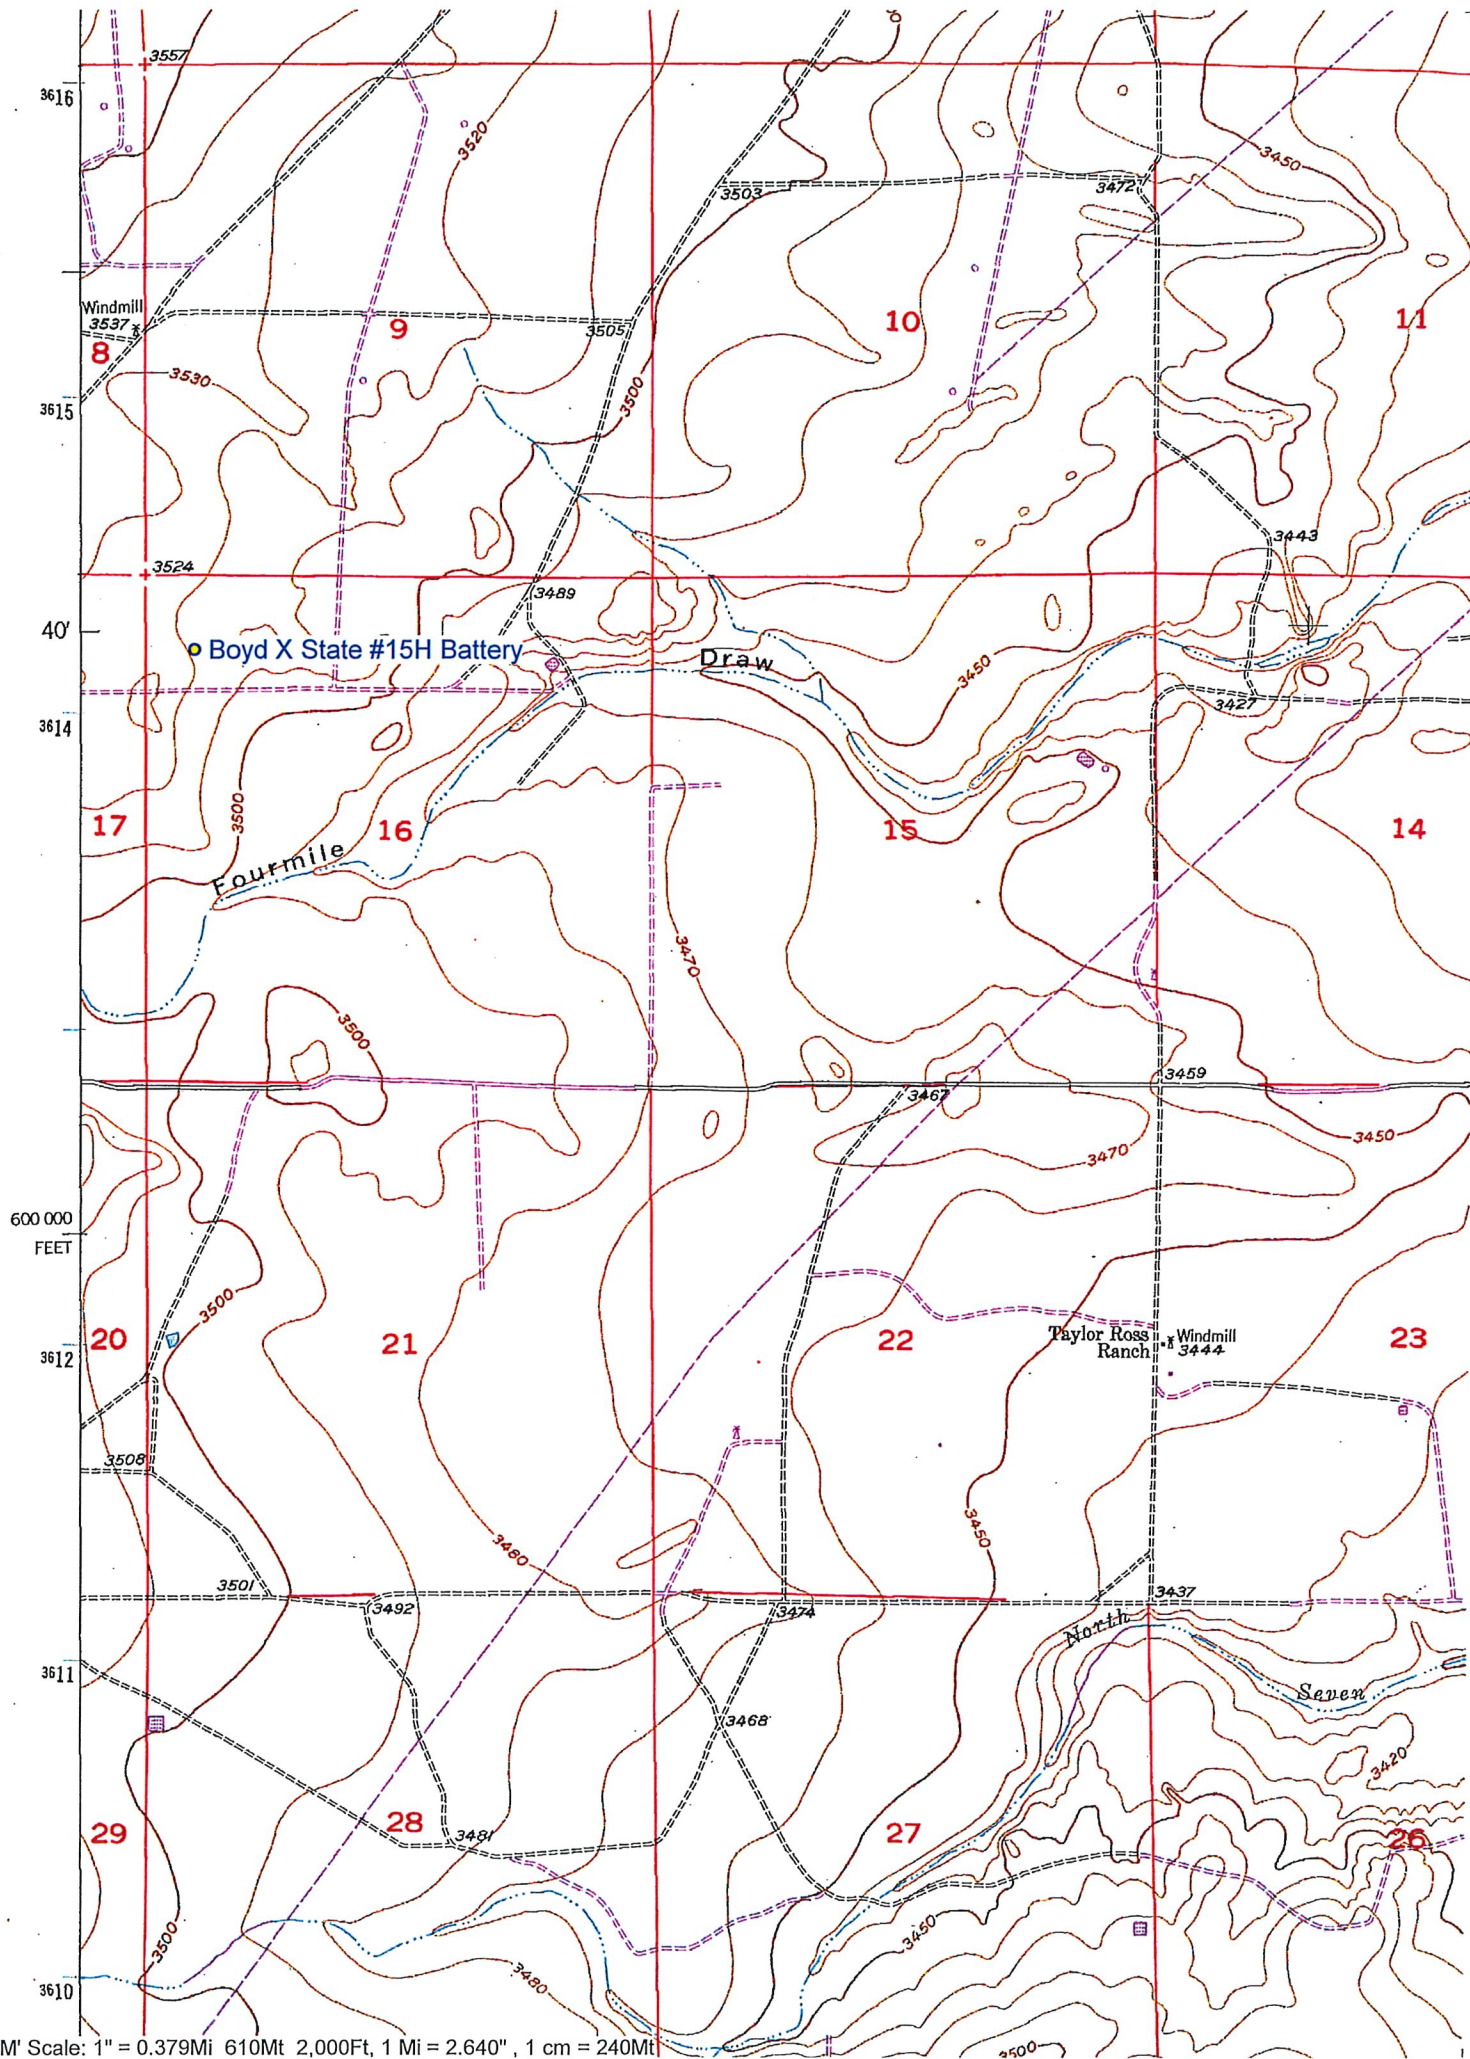

VII. Site Closure

Upon completion of the remedial and backfilling activities, EOG Resources, Inc. will submit a Form C-141/Closure to the NMOCD, and site closure requested.
