NCE2002755660 HAMON FED COM A 3H @ 30-025-41305

Mr. Cunningham

The OCD has approved the Site Characterization and Remediation Plan for incident # with the following conditions of approval:

- Additional excavation may be required to meet the 600 mg/kg for sidewall samples in the SH2 sample area. Be advised, that the values for the determination of the horizontal impact -the edges of a liquid release- are derived by either "background" value or 600 mg/Kg for chlorides. Wall samples should be below 600 mg/Kg, or background, for chlorides.

The signed C-141 can be found in the online image data base under the incident #.

Thank you,

Victoria Venegas

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
