Victoria,

I've updated the site map. Yes our scale was off. I'm going to have to pay more attention to the scale on our drone images. I'm very sorry for that.

We measured the excavated areas with a distance wheel yesterday. As shown on the attached map, excavated areas by Talon are 60x40', 10x30' and 15x5'. 2775 sq. ft.

The southeast corner of the well pad was initially sampled on 6/26/20 (samples S-4 thru S-7). The analytical results did not warrant remedial actions. Therefore confirmation samples were not taken from this area as we did not excavate here.

Please let me know if you require anything further on this.

Respectfully,

David J. Adkins

All,

Can I get you to clarify the size of the area affected by this spill? In Figure 2 Excavation / sample map if the scale is correct, the spill appears to encompass an area of approximately 25,000 square feet. Is it correct?

Thank you,
