information. It was discovered that 52 barrels of produced water and 10 barrels of oil was released to the ground surface. No fluid was recovered, the majority of the release remained within the caliche lease road. Describe Area Affected and Cleanup Action Taken.* The majority of the release remained within the caliche lease road, no fluid was recoverable at the time of discovery. Samples were collected, and based on laboratory analytical data and NMOCD approval: the lease road was scraped up, contaminated soil excavated and hauled to a state approved disposal facility, a liner placed over area of SP1, and the excavation backfilled with clean soil.
