Dear Van:

Regarding the pit closure procedures on the above referenced well, Marbob Energy Corporation drilled a 66' deep test hole. A twenty-four hour test showed no water in the hole. Marbob personnel was in contact with Tim Gumm of your office during this testing process.

On the pit closure C-144 submitted in January 2005, we stated that the well was less than 1000' from a surface water source, judging from the topo map. After measuring the actual distance with a measuring device, we determined that the well is actually further than 1000' from the water source. Therefore we are submitting a new pit closure plan.

Please feel free to call me at 513-0582.

Sincerely,

Gerald Herrera
