13. Describe proposed or completed operations: (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

3/26/2013

At approximately 9:10 A.M., a discharge of an estimated 3 bbls oil occurred. The discharge occurred while the rig crew was taking off the bottom frac stack valve and putting on the BOP to start the clean out / drill out procedure. The well had been dead since 2:30 that morning but unloaded up the casing and the flow hit the WSU tubing board and then fell back on the BPU. The south wind carried the oil/gas mist north where it fell on the location and new tanks. The WSU and BPU were washed clean. All contaminated caliche was scraped up and is scheduled to be hauled to Gandy Marley.
