13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Devon Energy Production Company L.P. respectfully requests to combine the conductor and surface casing for the Cerf 10 Fed 3H (API #30-015-41058 w/ Cerf 10 Fed 4H API # 30-015-41059). The proposal is to set surface casing (94# BT&C J/K-55 same as permitted) with a "rat-hole" rig at the same depth as originally permitted of 175' and cement. Cementing volumes remain as permitted.

Subject: RE: Cerf 10 Fed 3H & 4H Sundry  
To: "efernand@blm.gov" <efernand@blm.gov>

Ed,

Below is what I submitted to regarding combining the conductor and surface casing. Please call me if you need further detail.

Devon respectfully request to combine the conductor and surface casing for the Cerf 10 Fed 3H and 4H. The proposal is to set surface casing (94# BT&C J/K-55 same as permitted) with a "rat-hole" rig at the same depth as originally permitted of 175' and cement. Cementing volumes remain as permitted. Cactus 126 is planned to begin moving onto the Cerf 10 Fed 3H location by Thursday June 6th from the Burton Flat Deep Unit 55H. The Cerf 10 Fed 4H will be drilled following the Cerf 10 Fed 3H.

Wesley stated (below) there was missing information:

1) "did not specify that the cementing would be done using the float/plug method as would have been used if set inside of the conductor". This statement is added to the sundry at the bottom of the email.

2) "there was no timeline for when the big rig will arrive and commence the remainder of the hole". I did state in the sundry the rig will be moving onto this location Thursday June 6<sup>th</sup>. We are a few days delayed, but the Cerf 3H and the 4H are the next 2 wells. A revised date to move to the Cerf 3H would be 6-10-13. However we need time to arrange for the conductor/surface casing to be set.

**Revised sundry request**

***Devon respectfully request to combine the conductor and surface casing for the Cerf 10 Fed 3H and 4H. The proposal is to set surface casing (94# BT&C J/K-55 same as permitted) with a "rat-hole" rig at the same depth as originally permitted of 175' and cement. Cementing method will be using the plug method by under displacing by 10-bbs and shutting in the casing while under pressure. Cementing volumes remain as permitted. Cactus 126 is planned to begin moving onto the Cerf 10 Fed 3H location by Thursday June 10th from the Burton Flat Deep Unit 55H. The Cerf 10 Fed 4H will be drilled following the Cerf 10 Fed 3H.***

Thanks

**Subject:** Re: Cerf 10 Fed 3H & 4H Sundry

I am in Albuquerque for meetings. I did talk to Ed about them and the sundries appear to be incomplete. He stated that they did not specify that the cementing would be done using the float/plug method as would have been used if set inside of the conductor. It did state that the cement program would not change.

Second, according to Ed, there was no timeline for when the big rig will arrive and commence the remainder of the hole. That was an item that you and I discussed.

Sincerely,

Wesley W. Ingram
