If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*  
 The Y-Strainer on a transfer pump clogged causing the water tank to overflow, releasing approximately 15bbbls of water. Talon/LPE was contracted to perform an initial site assessment and soil sampling. Upon receipt of analytical results from the soil sampling activities, a work plan will be drafted and remedial activities will begin upon its approval.

Describe Area Affected and Cleanup Action Taken.\*  
 The surface area of the release measures approximately 8X96 feet. Approximately 3 of the 15bbbls are in the pasture.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
