Oxy USA Inc. - Turkey Track 9-10 State 22H

SUNDRY

Oxy respectfully requests a dispensation from the approved permit as follows:

1) Utilize a spudder rig to pre-set surface casing for time and cost savings.

	Yes/No
 Will more than one drilling rig be used for drilling operations? If yes, describe. Oxy requests the option to contract a Surface Rig to drill, set surface casing, and cement for this well. If the timing between rigs is such that Oxy would 	Yes
not be able to preset surface, the Primary Rig will MIRU and drill the well in its entirety per the APD. Please see the attached document for information on the spudder rig.	

Description of Operations

1. Spudder rig will move in to drill the 17.5" surface hole and pre-set the 13-3/8" surface casing on the well.

a. After drilling the surface hole section, the spudder rig will run casing and cement following all of the applicable rules and regulations (OnShore Order 2, all COAs and NMOCD regulations).b. The spudder rig will utilize fresh water-based mud to drill the surface hole to TD. Solids

control will be handled entirely on a closed loop basis. No earth pits will be used.

The surface casing will be rough cut after cemented in place. Once the WOC time requirements are met, operations will continue with the nipple up of the wellhead and testing.
 A blind flange at the same pressure rating as the wellhead will be installed to seal the

wellbore. Pressure will be monitored with needle valves installed on two wingvalves.

a. A means for intervention will be maintained while the drilling rig is not over the well.

4. Spudder rig operations are expected to take 2-3 days per well on the pad.

5. The NMOCD will be contacted and notified 24 hours prior to commencing spudder rig operations.

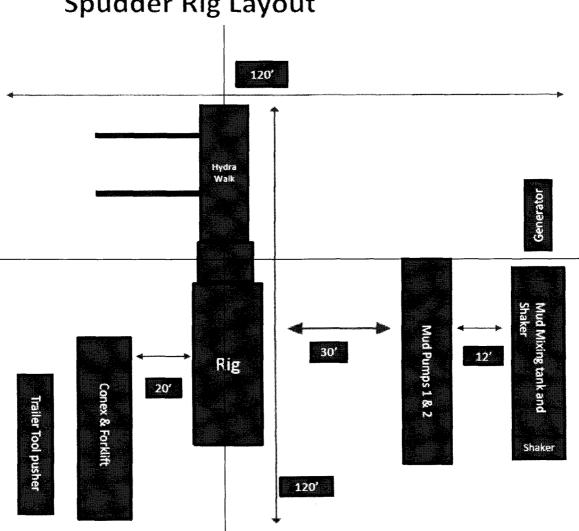

6. Drilling operations will begin with a larger rig and a BOP stack equal to or greater than the pressure rating that was permitted will be nippled up and tested on the wellhead before drilling operations resume on each well.

a. The larger rig will move back onto the location within 90 days from the point at which the wells are secured and the spudder rig is moved off location.

b. The NMOCD will be contacted / notified 24 hours before the larger rig moves back on the pre-set locations.

7. Oxy will have supervision on the rig to ensure compliance with all NMOCD regulations and to oversee operations.

8. Once the rig is removed, Oxy will secure the wellhead area by placing a guard rail around the cellar area.
