Consolidating production to one battery will extend the economic life for these wells and lessen surface disturbance.

Commingle will not reduce value of production.

All interest owners have been notified.

All lease Royalty Rates are 12-1/2%.

Please see attachments.

APPLICATION FOR A POOL COMMINGLE

Pool Commingle Proposal for the Holder CB Federal Wells:

COG Operating is requesting approval for a Pool commingle for the following wells:

| | MLC056551A (12.5%) | 4 D1 # | Doel | BOPD | Oil Gravities | MCFPD | Dani |
|------------------------------|--------------------------------------|-----------------------|---|------|------------------|--------|---------------------|

^{*}These are proposed totals for these wells; once these wells are turned back on the production information will be amended.

Attached map displays the federal leases and well locations in Section 17-T17S-R30E.

The BLM's interest in all ten wells is the same. Lease NMLC 056551A royalty rate is 12.5° c.

Oil & Gas metering:

The central tank battery is located on the pad for the Holder CB Federal #6 well located in SWNW, Sec. 17-T17S-R30E on federal lease NMLC 056551A in Eddy County, New Mexico. Flowlines from producing wells terminate into the test/production header which serves as the inlet to the tank battery. From the header, one well can be put in test while the remaining wells are combined in the production header for separation and storage of produced fluids.

The 3-phase horizontal test separator and associated metering devices have been sized for the expected range of fluid rates from the production wells. The sizing and calibration of this equipment ensures accurate measurement of produced fluids from a well in test. Separate meters are used for measuring oil, water and gas. After fluids are separated, oil and water flow rates are measured using turbine meters (PO) #TBP, and the gas flow rate is measured using an orifice meter (PG) #TBP. After measurement the fluids are recombined with the main production stream and routed to the heater-treater for processing.

Monthly gas and oil production will be allocated based on the percentage of each wells contribution as determined through well tests. This battery will handle a total of 8 horizontal wells. Each well will be tested at least once a month and the duration of each test will be a minimum of three days. The oil test meter will be proven as per API, NMOCD, and BLM specifications, when installed, once per month for the first 3 months (to establish a consistent repeatability factor), and then quarterly thereafter, the factor obtained will be used to allocate the production volumes. The gas test meter will be calibrated on a regular basis per API, NMOCD and BLM specifications.

Combined fluids from the production header and test separator will be routed to a heater-treater where gas, oil, and water are separated. Gas separated at this point is sent to the DCP Midstream CDP meter #713924-00 which is located in SWNW, Sec. 17-T17S-R30E. Oil and water from this separator are routed to the oil and water storage tanks. Any gas that flashes off during the additional processing stages is tied directly into the gas sales system upstream of the CDP meter. This meter will be calibrated on a regular basis per API, NMOCD and BLM specifications.

The Holder CB Federal 6-7 battery will have two 500 BBL oil tanks that all wells will utilize. These oil tanks have a common delivery point on the northwest side of the location where oil is hauled via trucking by Holly Transportation. Oil sales volume is determined by gauging of sealed tanks before and after the truck is loaded in accordance with applicable API, NMOCD, and BLM specifications.

Water from all producing wells will be separated through the use of the heater-treater prior to being routed to the one 500 BBL water tank. Water will then be transferred out of the tanks and tied into a Company owned SWD system. Bulk water leaving the facility is measured using a turbine meter.

Holder CB Federal #1 production will flow into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #2 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #4 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #5 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #6 production will flow into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #7 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #9 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #10 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #12 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

Holder CB Federal #20 production flows into the test/production header and is routed through the process as described above. No other unique metering devices are included on this individual well.

The BLM and OCD will be notified of any future changes in the facilities.

Process and Flow Descriptions:

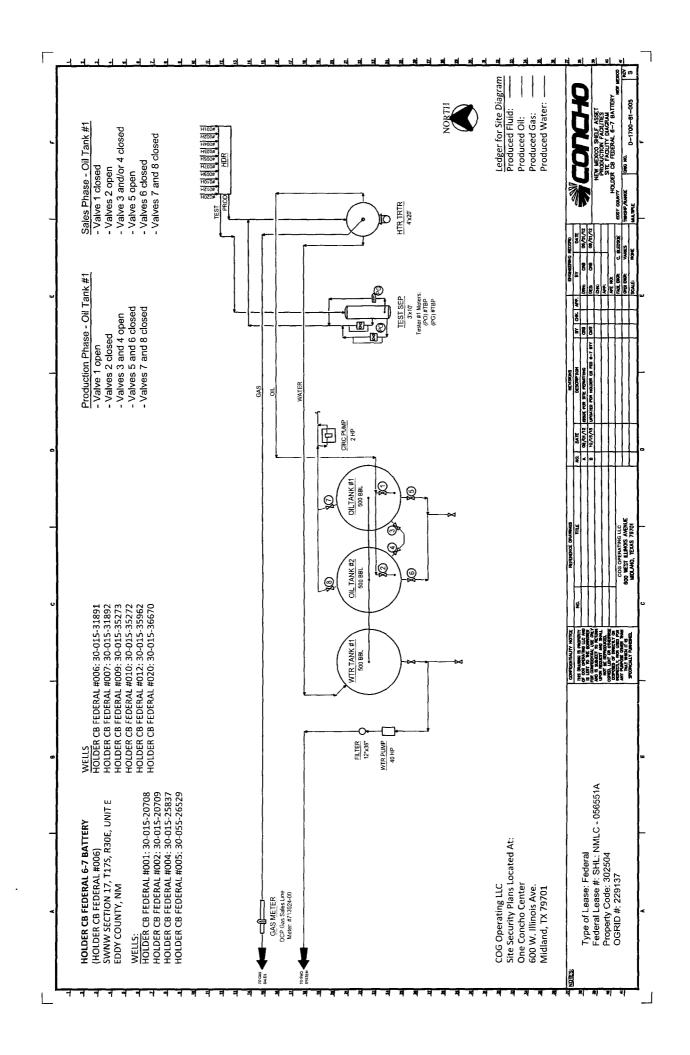

The flow of produced fluids is shown in detail on the enclosed facility diagram, along with a map which shows the lease boundaries, and location of wells, facility, and gas sales meter. The proposed commingling is appropriate based on the BLM's guidance in IM 2013-152. The proposed commingling will maximize the ultimate recovery of oil and/or gas from the federal leases and will reduce environmental impacts by minimizing surface disturbance, reduce the surface facility footprint and overall emissions. The proposed commingling is the most effective economical means of producing the reserves and will reduce operating expenses, as well as, not adversely affect federal royalty income, production accountability, or the distribution of royalty.

Working, royalty, and overriding interest owners have been notified of this proposal via certified mail (see attached).

COG Operating, LLC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

RE: Request for Surface and Pool Commingle

To Whom It May Concern:

This letter will serve as notice under Rule 104.F (3) that COG Operating LLC has requested administrative approval from the Oil Conservation Division in Santa Fe, NM for Surface & Pool Commingle of production from the following wells into the Holder CB Federal #6 Central Tank Battery located in Eddy County, New Mexico:

Holder CB Federal # 1 API # 30-015-20708 Grayburg Jackson; SR-Q-G-SA 28509 Surface: 1980 FNL & 660 FWL Sec 17, T17S, R30E, Unit E

Holder CB Federal # 2 API # 30-015-20709 Grayburg Jackson; SR-Q-G-SA 28509 Surface: 660 FNL & 660 FWL Sec 17, T17S, R30E, Unit D

Holder CB Federal # 4 API # 30-015-25837 Loco Hills; Glorieta Yeso 96718 Surface: 2310 FNL & 330 FWL Sec 17, T17S, R30E, Unit E

Holder CB Federal # 5 API #: 30-015-26529 Grayburg Jackson; SR-Q-G-SA 28509 Surface: 1295 FNL & 990 FWL Sec 17, T17S, R30E, Unit D

Holder CB Federal # 6 API# 30-015-31891 Grayburg Jackson; SR-Q-G-SA 28509 Surface: 2310 FNL & 990 FWL Sec 17, T17S, R30E, Unit E Holder CB Federal # 7 API# 30-015-31892 Loco Hills; Glorieta Yeso 96718 Surface: 1650 FNL & 330 FWL Sec 17, T17S, R30E, Unit E

Holder CB Federal # 9 API# 3-015-35273 Loco Hills; Glorieta Yeso 96718 Surface: 920 FNL & 330 FWL Sec 17, T17S, R30E, Unit D

Holder CB Federal # 10 API# 30-015-35272 Loco Hills; Glorieta Yeso 96718 Surface: 330 FNL & 990 FWL Sec 17, T17S, R30E, Unit D

Holder CB Federal # 12 API# 30-015-35962 Loco Hills; Glorieta Yeso 96718 Surface: 1830 FNL & 990 FWL Sec 17, T17S, R30E, Unit E

Holder CB Federal # 20 API# 30-015-36670 Loco Hills; Glorieta Yeso 96718 Surface: 330 FNL & 330 FWL Sec 17, T17S, R30E, Unit D A copy of this application is enclosed for your reference. Should you, or your company, have any objection, it must be filed in writing within twenty (20) days from the date of this notice to the New Mexico Oil Conservation Division at the following address: 1220 S St. Francis Drive, Santa Fe, New Mexico 87505. The Division Director may approve the Surface Commingle if no objection has been made within the 20 days after the application has been received. Please do not hesitate to reach us with any questions at the phone number given below.

Sincerely,

COG OPERATING LLC

Holder CB Federal wells Lease NMLC056551A

COG Operating LLC July 24, 2017 Condition of Approval Surface Pool commingling and off lease gas measurement and sales

- 1. This approval is subject to like approval by the New Mexico Oil Conservation Division.
- 2. This agency shall be notified of any spill or discharge as required by NTL-3A.
- 3. This agency reserves the right to modify or rescind approval whenever it determines continued use of the approved method may adversely affect the surface or subsurface environments or product accountability.
- 4. This approval does not constitute right-of-way approval for any off-lease activities. Within 30 days, an application for right-of-way approval must be submitted to the Realty Section if not already done.
- 5. Approval for combining production from various sources is a privilege which is granted to lessees for the purpose of aiding conservation and extending the economic life of leases. Applicants should be cognizant that failure to operate in accordance with the provisions outlined in the Authorized Officer's conditions of approval and/or subsequent stipulations or modifications will subject such approval to revocation.
- 6. Gas measurement for allocation must be measured as per Federal Regulations, AGA and API requirements for sales meters.
- 7. All gas and oil subject to royalty shall be measured as per federal regulations and shall be reported to ONRR as required. All gas which is vented, flared or used on lease shall be reported as per NTL-4A to ONRR. All gas which is vented or flared shall be subject to royalty, unless prior approval was given by the authorized officer.
- 8. This agency shall be notified of any change in sales method or location of sales point.
- 9. Additional wells require additional commingling approvals.
- 10. Notify this office 24 Hrs. prior to any meter calibration/proving to allow time for an inspector to witness.
- 11. Submit meter numbers upon installation of meters and also provide updated facility diagram with meters numbers.
