Details of proposed method of measurement and allocation of production for each lease or agreement.

The oil will be collected in the Keohane Federal tank battery located in the SWSE/4 of section 24, T18S, R31E and measured by tank gauge. See exhibits 1, page 2.

Testing will be conducted by isolating each well each month for a 24 hour period. A ratio of production by well will be used to for purposes of allocating production monthly.

The measurement point will be at the tank battery located in the SWSE/4, sec 24, T18S, R31E

#### Evidence that Federal Royalties will not be reduced by commingling

The oil produced from all the wells are from the same field and reservoir, specifically the Shugart Yates, 7 Rivers, Queen/Grayburg.

See the November 2016 and February 2017 run Statement from Holly Frontier attached as Exhibit 2 page 1 & 2. This exhibit shows the gravity measured from the lease and also shows that the price is the same regardless of gravity.

The oil price will be the same before AND after comingling since these wells produce from the same zone.

There is no gas being produced on this lease

This oil is sold as Sour Crude

#### **Current facility Diagram**

See Exhibit #1 page 3 - Facility Diagram

#### Maps

See Exhibit 1, page 1 which is a land plat showing the Lease Boundaries, Lease Serial Numbers, Section Township, Range and Well Locations. Exhibit 1 Page 2 shows the location of the tank battery which will be used for storage and measurement.

#### Copy of serial register page from LR2000

Exhibit 3 Part 1 shows the BLM Case Record (Live) Serial Register Page for the Lease #NMNM106714 and shows that the royalty Rate is 12 ½%

Exhibit 3 Part 2 shows the BLM Case Record (Live) Serial Register Page for the Lease #NMNM25777 and shows that the royalty Rate is 12 ½%

#### Interest owners have been notified for the purpose of surface comingling

These leases are identical in ownership, owners are eager to get the leases comingled.

#### Justification for comingling

See Exhibit 4, pages 1-5: Production curves for each well and the combination of all 4 wells
See Exhibit 5, pages 1-5; Economic runs showing production forecasts and cash flow for each well and a
total for all 4 wells. The production and declines used in this exhibit were obtained by using the
Production curves shown in exhibit 4. These economics were run using the Working Interest, Revenue
interests, current oil price and operating expenses reported by the operator. Following are the
estimated economics for the Keohane 24 Federal wells:

		Net	Net		
		Future	Future	NPV	Percent
Well	Lease	Bbls	Revenue	10% Disc.	Of Battery
#1		4,128	\$32,060	\$35,609	23.68%
#2		4,128	\$32,060	\$35,609	23,68%
#3		4,403	\$44,197	\$43,540	28.96%
#4		4,128	\$32,060	\$35,609	23.68%
Total L	ease	16,787	\$140,307	\$150,367	100.00%

It is estimated that it would cost approximately \$55,000 to build a new tank battery on the Keohane 24 Fed #1 lease, See Exhibit 6. Using the figures presented it is apparent that if a new battery would be needed for the Keohane 24 Fed Lease it would cost approximately 1/3 of the discounted value of the net income stream for the lease.

#### Conclusion

If a new battery is required for the Keohane 24 Fed lease the Keohane 24 Fed #1 would have to be shut down, plugged and abandoned resulting in a loss of revenues for all owners including the United States of America.

We hereby request approval to comingle these two leases at the surface.
