Submit Original to Appropriate District Office

Oil Conservation Division 1220 South St. Francis Dr. Santa Fe, NM 87505

Date: 02/15/2018	GAS CAPTURE PLAN	
☑ Original □ Amended - Reason for Amendment:	Operator & OGRID No.: Marathon Oil Permian LLC.	372098
a ranonded reason for ranchament.		

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

EED 2 0 2040

Well(s)/Production Facility - Name of facility

FEB 20 2018

ARTESIA DISTRICT

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well Location (ULSTR)	Footages	Expected MCF/D	Flared or Vented	CorRECEIVED
Catapult FEE 23 26 1 WXY 3H		O-1-T23S-R26E	463' FSL 1527' FEL	1,894	Flared	
Catapult FEE 23 26 1 WA 5H	30-015 44691	O-1-T23S-R26E	463' FSL 1497' FEL	1,894	Flared	
Catapult FEE 23 26 1 TB 6H		O-1-T23S-R26E	463' FSL 1467' FEL	1,419	Flared	
Catapult FEE 23 26 1 WXY 10H		O-1-T23S-R26E	436' FSL 1437' FEL	1,894	Flared	

Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated to <u>Sendero</u> and will be connected to <u>Sendero</u>'s low pressure gathering system located in <u>Eddy</u> County, New Mexico. It will require approximately 1 mile of pipeline to connect the facility to low pressure gathering system. <u>Marathon</u> provides (periodically) to <u>Sendero</u> a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, <u>Marathon</u> and <u>Sendero</u> have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at <u>Sendero</u>'s Processing Plant located in Sec. 31, Twn. 23S, Rng. 28E, Eddy County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on <u>Sendero</u>'s system at that time. Based on current information, it is <u>Marathon's</u> belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation On lease
 - Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
 - Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal On lease
 - o Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
