OXY USA Inc. respectfully requests the following changes in the casing design, cement design, BOP, and mud program design.

Į	2. Casing P	rogram

								Safety	Factor	
Hole Size	Casing	Inte rval	Csg. Size	Weight	Grade	C	Culler	D	Body	Joint
nole Size	From (ft)	To (ft)	(in)	(lbs/ft)	Grade	Conn.	Collapse	Burst	Tension	Tension
14.75	0	400	10.75	45.5	J-55	BTC	> 1.125	> 1.2	> 1.4	> 1.4
9.875	0	9,646	7.625	26.4	L-80	BTC	> 1.125	> 1.2	> 1.4	> 1.4
6.75	0	20,437	5.5	20	P-110	DQX	> 1.125	> 1.2	> 1.4	> 1.4
							De	signs will n	neet or exc	eed

All casing strings will be tested in accordance with Onshore Oil and Gas Order #2 III.B.1.h *OXY requests the option to set casing shallower yet still below the salts if losses or hole conditions require this. Cement volumes may be adjusted if casing is set shallower and a DV tool may be run in case hole conditions merit pumping a second stage cement job to comply with permitted top of cement. If cement circulated to surface during first stage we will drop a cancelation cone and not pump the second stage.

OXY would like to request a <u>variance</u> for annular clearance around production tubular couplings in the open hole interval comprised of the curve and lateral portions of the well. The production string clearance inside the intermediate string meets the requirements for >0.422in clearance as shown in the table below. The clearances for the production string are as follows:

Description	Csg/Hole ID	Coupl. OD	Clearance
DQX Coupling in 7-5/8" Casing	6.969	6.05	0.4595
DQX Coupling in 6.75in OH	6.75	6.05	0.35

## **B. Cementing Program**

Casing	Slurry	#Sks	Wt. (Lb/gal)	Yld ft3/sack	H20 gal/sk	500# Comp. Strength	Slurry Description
Surface	Surface Surface already set by spudder rig						
1st Stage	Lead	639	10.2	2.58	11.568	6:59	Pozzolan Cement, Retarder
Intermediate	Tail	160	13.2	1.61	7.804	7:11	Class H Cement, Retarder, Dispersant, Salt
DV/ECP Tool @ 3263ft							
2nd Stage Intermediate	Tail	974	13.6	1.67	8.765	7:32	Class C Cement, Accelerator, Dispersant
Production Casing	Tail	820	13.2	1.38	6.686	3:49	Class H Cement, Retarder, Dispersant, Salt

Casing String	Top of Lead (ft)	Bottom of Lead (ft)	Top of Tail (ft)	Bottom of Tail (ft)	% Excess Lead	% Excess Tail
Surface	N/A	N/A	0	400	N/A	100%
lst Stage Intermediate Casing	3163	8646	8646	9646	40%	20%
2nd Stage Intermediate Casing	N/A	N/A	0	3263	N/A	150%
Production Casing	N/A	N/A	9146	20437	N/A	20%

## 5 Prosecto Correct Source of project

BOP installed and tested before drilling which hole?	Size	Min. Required WP	Туре		Tested to:
9.875" Hole			Annular	x	70 % of working Pressure
	13-5/8"	10M	Blind Ram	x	250/10 000
	15-5/6	10141	Pipe Ram	pe Ram	
			Double Ram	х	250/10,000 psi
			Other*		]

*Specify if additional ram is utilized.

BOP/BOPE will be tested by an independent service company to 250 psi low and the high pressure indicated above per Onshore Order 2 requirements. The System may be upgraded to a higher pressure but still tested to the working pressure listed in the table above. If the system is upgraded all the components installed will be functional and tested.

Pipe rams will be operationally checked each 24 hour period. Blind rams will be operationally checked on each trip out of the hole. These checks will be noted on the daily tour sheets. Other accessories to the BOP equipment will include a Kelly cock and floor safety valve (inside BOP) and choke lines and choke manifold. See attached schematics.

Formation integrity test will be performed per Onshore Order #2. On Exploratory wells or on that portion of any well approved for a 5M BOPE system or greater, a pressure integrity test of each casing shoe shall be performed. Will be tested in accordance with Onshore Oil and Gas Order #2 III.B.1.i.					
A var	ance is requested for the use of a flexible choke line from the BOP to Choke old. See attached for specs and hydrostatic test chart.				
Υ	Are anchors required by manufacturer?				
and co per Or requir system that is rotary	tibowl or a unionized multibowl wellhead system will be employed. The wellhead onnection to the BOPE will meet all API 6A requirements. The BOP will be tested ashore Order #2 after installation on the surface casing which will cover testing ements for a maximum of 30 days. If any seal subject to test pressure is broken the in must be tested. We will test the flange connection of the wellhead with a test port directly in the flange. We are proposing that we will run the wellhead through the prior to cementing surface casing as discussed with the BLM on October 8, 2015. tached schematics.				

## BOP Broak Tosting Porcost

As per the agreement reached in the Oxy/BLM face-to-face meeting on Feb 22, 2018, Oxy requests permission to allow BOP Break Testing under the following conditions:

- 1. Only after a full BOP is conducted to the first well on the pad.
- 2. Only when skidding from an intermediate to another intermediate section. Exception will be an intermediate followed by a production hole. In that case a full BOP test will be conducted.
- 3. Only applicable for intermediates that do not penetrate into the Wolfcamp.
