**Subject:** Cypress Prospect, Eddy County, New Mexico - Cypress "34" Federal No.2 Well (API #30-015-35413)  
**Attachments:** 20070706152642.tif

Richard – Bryan Arrant of your Artesia, New Mexico office has suggested that I contact you with regard to our obtaining an approved C-104 (Request for Allowable and Authorization to Transport) for our captioned well. This well was drilled at a surface location 1,400' FNL & 1,800' FWL Section 34, T-23-S, R-29-E, N.M.P.M., Eddy County, New Mexico, and has a horizontal lateral extending in an easterly direction through the Bone Spring formation to a total measured depth of 11,075', which is approximately 1,897.46' FNL & 292.74' FEL of said Section 34. Pogo's perforated interval in this well within the Bone Spring formation extends from a measured depth of 8,295' to a measured depth of 10,965', with the most easterly end of such perforated interval being approximately 1,913.58' FNL & 390.39' FEL of said Section 34, which is orthodox for this type well. Bryan has also indicated that our initial penetration point in this well within the Bone Spring formation (i.e., such point being at approximately 1,423.38' FNL & 1,796.40' FEL of said Section 34) may also require NMOCD approval as a non-standard location, which we should be able to get administratively, given we own the full leasehold interest in said Section 34 - the lease covering All of said Section 34, among other lands, is, as to said Section 34, owned entirely by Pogo Producing Company. I have also included for your information and review a copy of the Well Completion Report [BLM Form 3160-4 (April 2004)] for this well, together with a copy of the directional survey report dated May 30, 2007, from Pathfinder Energy, and from which I calculated all of the surface locations shown herein (except for the surface location). I will call you shortly to discuss this matter further. Thanks, Scott
