Source of Release	Reserve Pit	Date and Hour of Occurrence	Unknown	Date and Hour of Discovery	1Jun09
Was Immediate Notice Given?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom?	N/A		
By Whom?	N/A	Date and Hour	N/A		
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	N/A		

If a Watercourse was Impacted, Describe Fully.*
N/A

Describe Cause of Problem and Remedial Action Taken.*

Describe Area Affected and Cleanup Action Taken.*

Upon detection of the presence of chlorides 2' below the liner, further excavation was conducted with soil samples being field tested at various depths. At 12'BGS a 5 point composite sample was obtained and a field test indicated chloride levels below 1000ppm. This sample was sent to the lab for analysis and the results confirmed a chloride level of <1000ppm. As requested by Mike Bratcher, NM OCD, another sample was obtained analyzed from 14'BGS to determine if the chloride level was < 250ppm. Lab results indicated that it was <250ppm. Mike Bratcher was notified of the results and advised that closure per the approved work plan could commence.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
