13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Marbob Energy requests approval to set 5 1/2"/17-J-55/LTC casing in a range from the currently approved 6900' to as high as 6350: we plan to clean out to 6900' and run open hole logs per the approved APD. There is a good possibility that the lower Yeso will look non-productive and that we will want to set casing at 6350'. This decision can't be made until we look at the logs. If casing is to be set at 6350', we plan to spot 50 sx Class "C" cement from 6760' to 6600' to cover the top of the Abo (plug will be tagged). The DV tool will be placed at 3950' (50' below 8 5/8" shoe), stage 1 cemented with 500 sx Super H (13 ppg, 1.67 cfps, volume subject to adjustment after logs are run) and stage 2 cemented with 375 sx Halliburton Light cement (12.5 ppg, 2.05 cfps) plus 100 sx Class "C" (14.8 ppg, 1.32 cfps). We plan to circulate cement on both stages.
