13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

BOPCO, LP respectfully requests exception to the requirement to circulate cement to surface on the 7" casing. A conventional CBL indicated the TOC at 915' and a subsequent radial CBL confirmed the TOC and cement across the 9-5/8" shoe at 3913'. Both logs have been provided to BLM for review. Perforating the 7" to circulate cement at this time would negatively affect the integrity of the casing and impact artificial lift operations. We therefore request that the well plan be revised to delay remedial work to bring cement to surface until the well is plugged. At that time, the 7" will be perforated and cement circulated to surface.

Pressure gauge required on annulus
