DETAILS OF WORK

U. S. GEOLOGICAL SURVEY

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate, by tick marks, the locations of casing points, and all other important proposed work)

We propose to complete Shell Trigg-Federal Well No. 3 with 2 7/8", 6.57 casing rather than 4 1/2" casing. The 2 7/8" casing will be cemented with 200 sx. on bottom and 50 sx. Class A + 4% (est. 125' fill) spotted at top of salt through an extra string.

This slim hole completion fulfills the requirements specified in GPOC Rule 107(e). (1) The well is less than 5000'; (2) It is a development well; (3) No known corrosive or pressure problems exist; (4) The well is a single zone completion; and (5) the casing will be 2 7/8" OD.

Verbal permission given by Mr. J. A. Inaur, D.C.C., to J. C. Yope via telephone 7-26-61 to commence operations when the hole reaches TD.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
