DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is to be drilled to a depth sufficient to test the Lees Hills Sand at approximately 2,850 feet. It is the intention to diamond core the Lees Hills section for additional engineering data.

The above unorthodox location was approved by the New Mexico Oil Conservation Commission by Order No. r-860, Case No. 1101, on August 30, 1956.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
