(Field)Eddy  
(County or Subdivision)New Mexico  
(State or Territory)The elevation of the derrick floor above sea level is ? ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Confirming telephone conversation with Mr. John A. Frost.

Present total depth of the well is 3837' in the Grayburg. A swabbing test of this section gave approximately 2 bbls. oil and 10 gallons salty sulphur water per hour.

It is proposed to move in rotary drilling tools and deepen the well to test the Glorieta at about 5200'. If commercial production is encountered in the Glorieta, 5½" casing will be set and cemented with sufficient volume behind the pipe to cover both the San Andres and the grayburg zones.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
