The elevation of the derrick floor above sea level is 3550 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill 7100' Abo Reef Test on above 40 acre unit. Plan to set 1400' of 2 5/8" casing with 250 sacks, enough to circulate cement. Rotary tools will be used from surface to T.O. In case of production, propose to run 4 1/2" graduated casing string to T.O. with approximately 900 sacks in two stages with cement circulated back to base of surface casing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
